

Questions regarding COS uptake

Promoting COS uptake

When promoting COS uptake, PRPs can collaborate with the research team to consider:

- How to promote the COS
 - How can patients' voices help promote the use of the COS?
 - What key messages could be used by public research partners to encourage COS uptake?
 - Patient communities can help promote COS uptake - how could this happen? Are there any existing links with patient organisations that could be used?
- How to tackle barriers to COS uptake:
 - If barriers to COS uptake are anticipated or develop during the study, is there anything that the patient voice can do to address these challenges?
